SUMMARY

QA Engineer for enterprise and government web applications: functional, regression and UAT testing, REST API validation with Postman and Newman, and load testing with JMeter and Locust. I also work directly in SQL Server on municipal data migrations (staging, column mapping, reconciliation and reversible corrections), backed by Python tooling. Focus on release quality, data integrity and practical test coverage.

CORE SKILLS

Testing & Quality: Functional / Regression / UAT, Test case design & defect tracking, Data migration & reconciliation testing, Bug reports and client-facing test reports
API & Performance: Postman, Newman, JMeter, Locust
Automation: Playwright (Python), Cypress (POM), Selenium + TestNG (Java), pytest / Streamlit AppTest
Data & Backend: SQL Server / SSMS, MySQL, Excel / openpyxl / pandas ETL, Bengali text & Unicode (NFC, Bijoy/SutonnyMJ)
Languages & Tools: Python, JavaScript, Java, Streamlit, Git / GitHub
Currently learning: TypeScript, Docker + CI/CD, SQL (advanced)

EXPERIENCE

SQA Engineer | RK Software (Bangladesh) Limited
March 2025 - Present | Dhaka, Bangladesh

- QA on the Dhaka North City Corporation (DNCC) revenue automation system: UI overhaul and feature upgrades, structured test cycles for the IT-enabled upgrade phase (Apr-Sep 2025) and the core upgradation phase (Apr 2026-Present).
- Run functional, regression and UAT cycles on enterprise and government web applications; write test cases and track defects to closure.
- Build and maintain Postman collections and run them with Newman for automated pre-release API validation.
- Run load and performance tests with Locust and JMeter, including session-based tests for ASP.NET WebForms; deliver client-facing performance reports.
- Building Python and Playwright automation for portal bulk entry where no import path exists (in progress), with data cleaning, duplicate matching and defensive validation.
- Delivered data migration for multiple municipal (pourashava) administrations into a 95-column tax assessment table, using SQL Server staging, schema validation and reversible correction scripts.
- Built a config-driven tax-head segregation engine and arrear-opening generators that split each holding's total tax into per-head line items, using each administration's own head IDs and rates.
- Verify migration results at both application and database layers: record-level checks, reconciliation and exception reports.
- Recently assigned to a centralized municipal tax platform that connects Pourashavas to one system in phases, contributing to the quality and data readiness of each connection.

QA Engineer (Remote, part-time) | IT Directorate, Bangladesh Army
April 2025 - Present | Remote

- Assisted with QA and Selenium-based test automation for IT Directorate software projects.

SELECTED PROJECTS

Municipal Data Migration Pipeline (SQL Server, Python, Streamlit, openpyxl, Unicode NFC)
Staging tables, a rule engine encoding the SOP, composite Bengali cell extraction, foreign-key ID resolution, a transactional INSERT...SELECT with a generated account number, and reversible correction scripts.

Tax-Head Segregation & Arrear Engine (Python, Streamlit, SQL Server, Excel)
A config-driven engine. Each administration's head catalog (IDs and rates) is loaded from configuration; walking the catalog in order, heads are added until their rates add up to the holding's total rate. It generates the child-table rows and the arrear-opening file, behind a Streamlit front end.

Trade License Reconciliation & Entry Automation (Python, Playwright, openpyxl, pdfplumber, SQL Server)
Three-stage pipeline (convert, scrape, UI entry) with row-level status, JSONL audit logs and a 36-column entry-ready schema. Reconciliation matched on mobile number plus business name, which found 15 genuinely missing records out of 450 rows. Fee and street normalization follow strict rules (fees never decrease).

Bijoy/SutonnyMJ to Unicode Converter (Python, Streamlit, pdfplumber, Unicode)
Streamlit app for DOCX, XLSX, CSV, DOC and PDF, with a patched glyph map and fixes for reph ordering and pre-base vowels. Also run as customized scripts that convert Bengali text across whole database tables.

EDUCATION

B.Sc. in Computer Science & Engineering, Daffodil International University, Dhaka, Bangladesh (2019 - 2023 (completed October 2023))

CERTIFICATIONS

- Software Quality Assurance (SQA) (ostad.app)
- API Testing with Postman (ostad.app)
- Test Automation with Playwright (ostad.app)
- Test Automation Fundamentals (Test Automation University)
- Software Testing / QA (Udemy)
