

RIZBI ISLAM

SQA ENGINEER | QA AUTOMATION | API & PERFORMANCE TESTING

464 Kazipara, Mirpur-10, Dhaka, Bangladesh | rizbi.cse@gmail.com | +880 1609-084529 | <https://rizbi-islam.github.io/profile>

PROFESSIONAL SUMMARY

SQA Engineer with hands-on experience in manual testing, REST API testing, and performance/load testing for enterprise and government-facing software systems. Skilled in Python-based test tooling and bulk data-processing automation, with a track record of catching data-integrity and reconciliation issues that automated pipelines alone miss. Actively building additional automation depth (Playwright, Cypress, Selenium/TestNG) through self-directed projects. Seeking an SQA / QA Automation role where rigorous manual testing judgment and growing automation skills can both be put to use.

PROFESSIONAL EXPERIENCE

IT Executive & QA Engineer — RK Software (Bangladesh) Limited, Dhaka

March 2025 – Present

- Perform manual functional, regression, and UAT testing on enterprise web applications, writing and executing test cases and logging defects through to resolution.
- Conduct REST API testing using Postman and Newman reporting, building and maintaining collections for automated pre-release API validation.
- Run load and performance testing with Locust and JMeter against production-bound web systems, including session-based load testing on ASP.NET WebForms applications requiring cookie/session-state handling per virtual user; analyze results into client-facing performance reports.
- Built a Python and Playwright bulk data-entry and migration tool that automated the transfer records from structured source files into a pre production web system — implemented as a resemble CLI runner with defensive validation, data-cleaning, and duplicate-matching logic to protect data integrity across interrupted or re-run migrations.
- Validate migration outcomes across application and database layers, including SQL Server/SSMS query-based processing, record-level verification, reconciliation, and exception checking.

QA Engineer — IT Directorate, Bangladesh Army (Remote)

April 2025 – Present

Core Upgradation & Maintenance of Revenue Automation System, DNCC (Apr 2026 – Present)

- Lead QA for an ongoing UI overhaul and feature upgrade cycle on a live revenue automation system for Dhaka North City Corporation, verifying functional correctness and regression safety across iterative releases.

IT-Enabled Up gradation & Maintenance of Revenue Automation System, DNCC (Apr 2025 – Sep 2025)

- Executed structured test cycles for a government revenue-automation platform upgrade, continuing without interruption into the current project phase above under the same role and employer.

TECHNICAL SKILLS

Manual & Functional Testing: Test case design, regression testing, UAT, defect tracking and reporting

API Testing: Postman, Newman, REST API validation and automated collection runs

Performance & Load Testing: Locust, JMeter, session-based load testing, results analysis and reporting

Programming & Scripting: Python (test tooling, data-migration automation)

Test Automation (self-directed): Playwright, Cypress with Page Object Model, Selenium with TestNG

Other Tools: Git/GitHub, Excel-based reconciliation and audit workflows

EDUCATION

B.Sc. in Computer Science & Engineering

Daffodil International University, Dhaka, Bangladesh | 2019 – 2023

SELF-DIRECTED AUTOMATION PROJECTS

Independent learning projects built outside of professional work to develop automation depth beyond current job responsibilities:

- Cypress UI Test Framework (Page Object Model) — github.com/rizbiislam — end-to-end UI test suite built with the Page Object Model pattern for maintainable, reusable test structure.
- Selenium/TestNG Automation Suite (OpenCart) — github.com/rizbiislam — Java/TestNG framework automating core e-commerce flows (search, cart, checkout) against the OpenCart demo platform.

CERTIFICATIONS

- Software Quality Assurance (SQA) — ostad.app
- API Testing with Postman — ostad.app
- Test Automation with Playwright — ostad.app
- Test Automation Fundamentals — Test Automation University
- Software Testing / QA — Udemy

CURRENTLY UPSKILLING

Actively expanding into SQL for test data validation and backend verification, TypeScript for scripting and automation code, and CI/CD pipelines with Docker to integrate automated test suites directly into build and deployment workflows.
