RIZBI ISLAM

SQA ENGINEER | QA AUTOMATION | API & PERFORMANCE TESTING

+880 1609-084529 • rizbi.cse@gmail.com • Dhaka, 1216, Bangladesh

PROFESSIONAL SUMMARY

Detail-oriented QA Engineer with experience in manual functional, regression, UAT, and REST API testing for enterprise and government web applications. Hands-on with Postman, Newman, JMeter, Locust, SQL Server/SSMS, MySQL, Python, Playwright, and Git/GitHub. Experienced in API validation, performance testing, data migration, reconciliation, defect tracking, and reusable automation for data-entry and testing workflows. Strong focus on release quality, data integrity, and practical test coverage.

CORE SKILLS

Testing
Manual, Functional, Regression, UAT, API, Load & Performance

Automation
Python, Playwright, Selenium, TestNG, Cypress

API & Tools
Postman, Newman, REST API validation, Git/GitHub

Database
SQL Server/SSMS, MySQL, data validation & reconciliation

Performance
JMeter, Locust, session-based load testing

QA Practices
Test case design, defect tracking, test reporting, regression coverage

PROFESSIONAL EXPERIENCE

SQA Engineer

RK Software (Bangladesh) Limited | March 2025 – Present
Dhaka

- Perform manual functional, regression, and UAT testing on enterprise web applications; write and execute test cases and track defects through resolution.
- Conduct REST API testing using Postman and Newman; build and maintain collections for automated pre-release API validation.
- Execute load and performance testing with Locust and JMeter on production-bound web systems, including session-based load testing for ASP.NET WebForms applications; analyze results and prepare client-facing performance reports.
- Developed a Python and Playwright bulk data-entry and migration tool to automate transfer of records from structured source files into pre-production web systems, with validation, data-cleaning, and duplicate-matching logic.
- Validate migration outcomes across application and database layers using SQL Server/SSMS for query-based processing, record-level verification, reconciliation, and exception checking.

QA Engineer — Remote

IT Directorate, Bangladesh Army | April 2025 – Present
Remote

- Core Upgradation & Maintenance of Revenue Automation System, DNCC — Apr 2026 – Present: Lead QA for UI overhaul and feature upgrades of the revenue automation system for Dhaka North City Corporation, ensuring functional correctness and regression safety across releases.
- IT-enabled Upgradation & Maintenance of Revenue Automation System, DNCC — Apr 2025 – Sep 2025: Executed structured test cycles for a government revenue-automation platform upgrade, maintaining continuous testing coverage during the project phase.
- Completed assigned QA activities remotely while maintaining testing continuity and release support.

EDUCATION

B.Sc. in Computer Science & Engineering
Daffodil International University, Dhaka, Bangladesh
Completed: October 2023

CERTIFICATIONS

- Software Quality Assurance (SQA) — ostad.app
- API Testing with Postman — ostad.app
- Test Automation with Playwright — ostad.app
- Test Automation Fundamentals — Test Automation University
- Software Testing / QA — Udemy

SELF-DIRECTED AUTOMATION PROJECTS

Cypress UI Test Framework (Page Object Model)
End-to-end UI test suite built using the Page Object Model pattern for maintainable and reusable test structure. github.com/rizbislam

Selenium/TestNG Automation Suite (OpenCart)
Java/TestNG framework automating core e-commerce flows including search, cart, and checkout against the OpenCart demo platform. github.com/rizbislam

CURRENTLY UPSKILLING

SQL for test-data validation and backend verification; TypeScript for scripting and automation; and CI/CD pipelines with Docker to integrate automated test suites into build and deployment workflows.

PROFESSIONAL PROFILE

rizbi-islam.github.io/profile

TECHNICAL FOCUS

Quality Engineering: Functional quality, regression safety, API reliability, performance validation, release readiness, and data integrity.

Automation Direction: Expanding practical automation coverage across UI, API, data validation, and CI/CD workflows.
