RIZBI ISLAM

SQA Engineer | API & Performance Testing | Data Migration QA | Test Automation

Dhaka, Bangladesh | +880 1609-084529 | rizbi.cse@gmail.com
linkedin.com/in/rizbi-islam | github.com/rizbi-islam | rizbi-islam.github.io/profile

PROFESSIONAL SUMMARY

SQA Engineer with hands-on experience in manual, API, performance and automation testing on municipal and city-corporation revenue systems. Responsible for multi-table SQL Server data migration, schema mapping, reconciliation and initial client training on a centralized Pourashava tax platform, onboarded in phases (ongoing). Previously tested the Dhaka North City Corporation revenue automation system under Bangladesh Army IT Directorate inspections, including Phase-1 load testing and BIDA to DNCC API integration testing. Focus on data integrity, release quality and practical test coverage.

SKILLS

Testing & QA: Functional / Regression / UAT, Smoke and integration testing, Test case design & defect tracking, Data migration & reconciliation testing, Bug reports and client-facing test reports

API & Performance: Postman, Newman, JMeter, Locust

UI Automation: Playwright (Python), Cypress (POM), Selenium + TestNG (Java), pytest / Streamlit AppTest

Database & Data: SQL Server / SSMS, MySQL, Excel / openpyxl / pandas / pdfplumber ETL, Bengali text & Unicode (NFC, Bijoy/SutonnyMJ)

Tools & Languages: Jira, Python, JavaScript, Java, Streamlit, Git / GitHub

Currently learning: TypeScript, Docker + CI/CD, SQL (advanced)

PROFESSIONAL EXPERIENCE

SQA Engineer | RK Software (Bangladesh) Limited
March 2025 – Present | Dhaka, Bangladesh

Pourashava Centralized Software (Ongoing)
Centralized municipal tax platform connecting Pourashavas in phases

- Responsible for data migration, multi-table schema mapping and data preparation for each Pourashava onboarded, using SQL Server staging, validation scripts and reversible correction scripts.
- Reconcile holding-tax, trade-license and historical taxpayer records (payment history, arrear details) across related tables, with exception reports for every mismatch.
- Developed Python tooling, with AI-assisted coding, for legacy Bengali (Bijoy/SutonnyMJ) text conversion, tax-head allocation and arrear-opening preparation, so each onboarding is repeatable.
- Deliver initial onboarding and functional training to client users.

DNCC Revenue Automation System (March 2025 – September 2026)
Delivered through RK Software for the Bangladesh Army IT Directorate, under Army inspections

- Served as QA specialist for the Dhaka North City Corporation revenue system: structured manual testing, test execution and administrative support for core revenue and administrative modules.
- Executed Phase-1 load testing and performance validation across the Citizen Portal, Corporation Portal and administrative panels.
- Verified workflows across 10+ administrative panels, including Taxation Officer, Zonal Executive Officer, Mayor and License Supervisor roles.
- Validated REST APIs used for data synchronisation between BIDA (Bangladesh Investment Development Authority) and the DNCC system, confirming pre-release data readiness.

Other QA work at RK Software

- Execute manual, regression and functional testing across web applications; log and track defects in Jira and work with engineering teams on verification and release readiness.
- Design and run session-based load tests with JMeter and Locust for high-traffic portals, including the RK Courier System, analysing throughput, latency and server bottlenecks.

PROJECTS

Municipal Data Migration and Reconciliation Pipeline | Python, SQL Server, openpyxl, pandas
Co-developed (AI-assisted) source-to-target mapping, staging and record-level validation scripts for municipal trade-license, holding-tax and payment-history data across multi-table SQL Server schemas; added explicit typing, Unicode normalisation and source-versus-loaded count checks after finding silent text loss caused by driver type-guessing.

Tax-Head, Arrear & Bill Engine | Python, Streamlit, SQL Server
Co-developed (AI-assisted) a configuration-driven tool, merged from separate scripts, that loads each administration's tax-head catalog and rates, generates one child row per applicable head, splits arrear and surcharge by each head's rate share with exact-total rounding, and prepares arrear-opening and bill data with pre-load validation.

Bijoy/SutonnyMJ to Unicode Conversion Utility | Python, Streamlit, pdfplumber, pytest
Co-developed (AI-assisted) an installable converter for legacy font-encoded Bengali text in DOCX, XLSX, XLS, CSV and PDF files, with a Streamlit interface and a pytest suite; named regression bugs (schema-order XML error, PDF space loss, numeric-cell coercion) were reproduced from real files before fixing. Also run as scripts over whole database text.

Reusable Test Automation Framework | Python, Playwright, pytest
Co-developed (AI-assisted) a Page Object Model framework with scaffold-once code generation and a pre-validation step that classes each data row as Ready, Needs review or Excluded before batch runs; applied to a trade-license batch-entry project (in progress).

EDUCATION

B.Sc. in Computer Science & Engineering | Daffodil International University, Dhaka, Bangladesh
2019 – 2023 (completed October 2023)

CERTIFICATIONS

- Software Quality Assurance (SQA) (ostad.app)
- API Testing with Postman (ostad.app)
- Test Automation with Playwright (ostad.app)
- Test Automation Fundamentals (Test Automation University)
